GitHub: github.com/Spectre113/Marusya

Avito Task:

- Seller dashboard with full CRUD functionality.
- Listing filtering, pagination, and editing.
- React Hook Form + Zod.
- AI-powered recommendations for listing descriptions and pricing.

GitHub: github.com/Spectre113/Avito-task

Additional experience

Solving algorithmic problems (Codewars, level up to 4 kyu)

Summary

Frontend Developer (React, TypeScript) developing SPAs with authentication, REST APIs, and server state management. Experienced with React Query, Zod, and component-based architecture, with a focus on maintainability and performance.

Project Experience

Personal Portfolio (05/2026-Present):

Tech Stack: React, TypeScript, Vite, React Router, TanStack Query, Zod, React Hook Form, Vercel Functions, REST API, CSS, CSS Variables, BEM

- Developed a modular SPA portfolio website.
- Implemented i18n (RU/EN), theme switching, and responsive design.
- Integrated the GitHub API with fallback handling and rate limiting.
- Built a contact form using React Hook Form and Zod.
- Integrated an AI assistant using Vercel Functions and the Groq API with rate limiting (8 requests/minute).
- Implemented API validation with Zod (up to 4,000 input characters), rate limiting, and error handling for HTTP 429/503.
- Optimized performance, achieving Lighthouse scores of 97/89 (desktop/mobile).
- Implemented SEO best practices: Open Graph, sitemap.xml, robots.txt, and canonical URLs.
- Added analytics for user interactions and resume downloads.
- Improved UX and accessibility with loading/error states, focus trap, and prefers-reduced-motion support.
